Reported by: Dorothy Martinez (dmartinez@servicedesk-simulator.com)
Department: Legal | Location: Floor 2
Contact: x4521

Issue Description:
None of the printers in the office are working! Every printer in the building shows offline. We tried sending jobs from a few floors and nothing prints anywhere. It was working yesterday evening.

Business Impact:
Legal team needs to print contracts for signing. Executive presentations cannot be printed.

How to resolve this

1.) Open Tools → Server Room

 **SERVER ROOM**

12/13 nodes up

Summary

A print server that stops responding to pings is typically frozen or crashed. Rebooting the print server will restore the print spooler service and allow all network printers to come back online.
